

# Unlock the Potential of Predictive Modeling with Rapid Insight

June 20, 2024

# Meet Your Presenters

**Lily Brennan**

*Strategic Leader,  
Data and Analytics*

**James Cousins**

*Senior Strategic Leader,  
Data and Analytics*

# Submit a Question or Comment

The screenshot displays the EAB Virtual Session interface. At the top left is the EAB logo, consisting of a blue circle with a white building icon and the text "EAB". The background is dark blue with a pattern of white geometric shapes (circles and squares). The text "EAB Virtual Session" is prominently displayed in the center. Below this, two white boxes with orange borders provide instructions: "Use the Chat feature to send messages to all panelists and attendees" and "Use the Q&A feature to ask presenters questions". At the bottom, a dark grey navigation bar contains four items: "Audio Settings" with an upward arrow, "Chat" with a speech bubble icon, "Q&A" with a speech bubble icon, and "Leave Meeting" in red text.

# Turn on Captions

The screenshot shows a video player interface. At the top left is the EAB logo, consisting of a blue circle with a white building icon and the text "EAB". The video content area has a dark blue background with a pattern of light blue geometric shapes. The text "EAB Virtual S" is visible. A yellow callout box with a black border points to the "CC" icon in the bottom center. The callout box contains the text: "Enable an automated Live Transcript – Show Subtitle or View Full Transcript". The "CC" icon is a small white circle with the letters "CC" inside. Below the "CC" icon is a dropdown menu with three options: "Show Subtitle" (highlighted in blue), "View Full Transcript", and "Subtitle Settings...". At the bottom left is the "Audio Settings" button with an upward arrow. At the bottom center is the "Live Transcript" button. At the bottom right is the "Leave Meeting" button in red text.

## This or That?

Inside in the  
air conditioning

Outside in the  
summer sunshine

Which of these steps are you already doing?

- a) Collecting data
- b) Organizing data
- c) Cleaning data
- d) Creating new variables in your data

# Predictive modeling isn't just for statisticians!

---

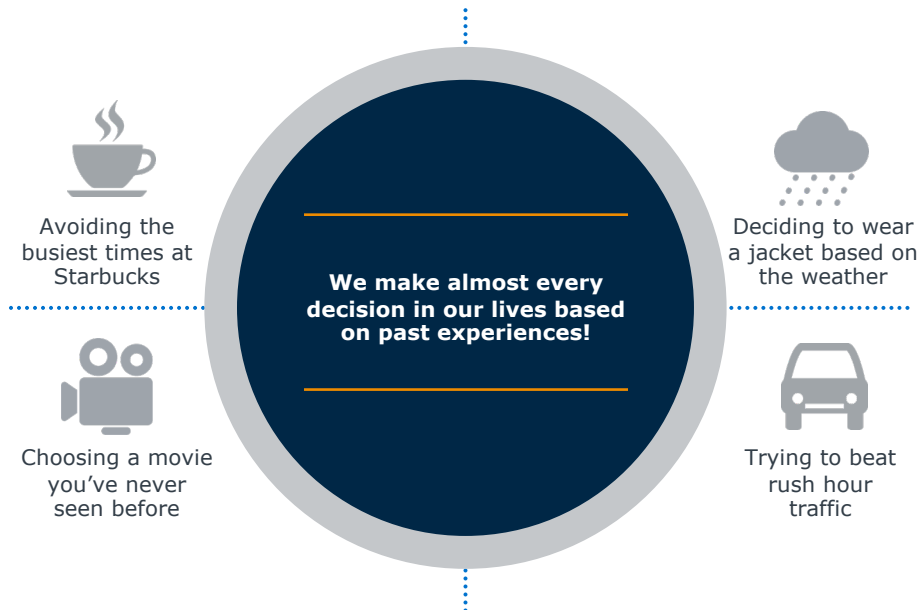

1

# Demystifying Predictive Modeling

## What is Predictive Modeling?

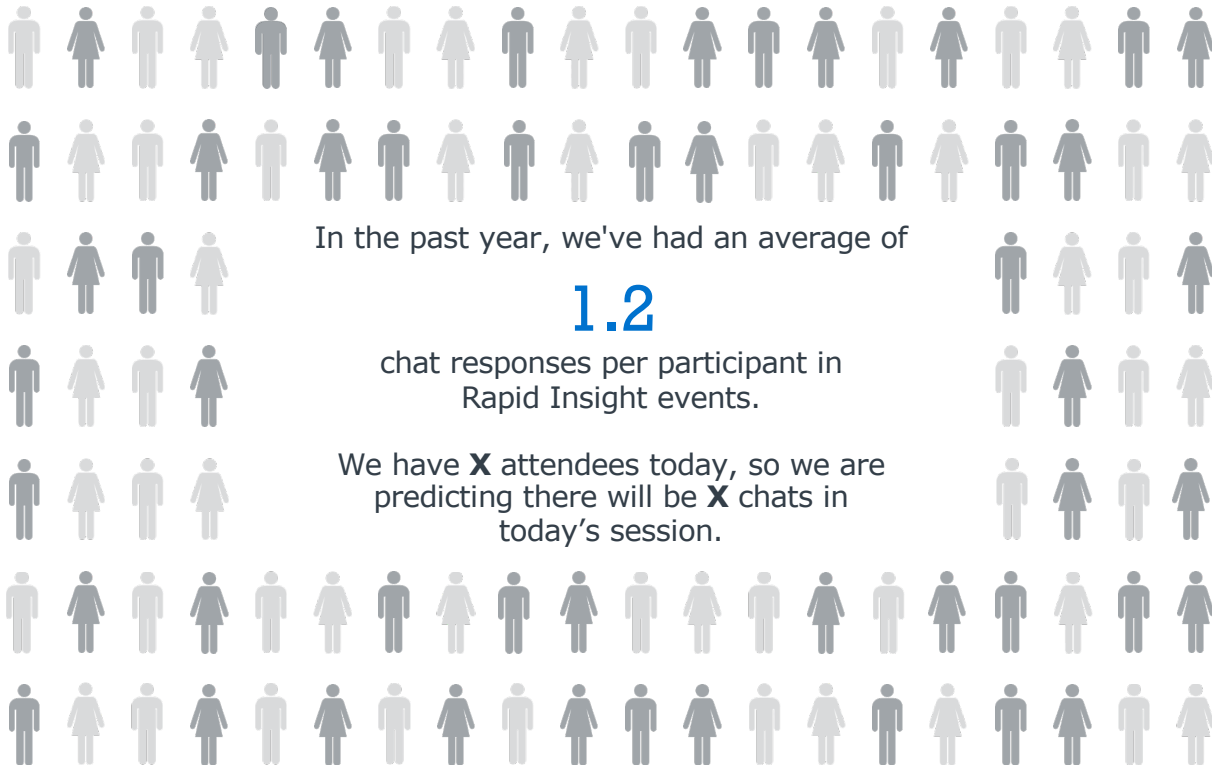

*It's as simple as looking at data and comparing against past events.*

**Having a hunch or hypothesis and finding correlations  
is predictive modeling!**

# Predictive Modeling in Practice

# Why Use Predictive Modeling?

## Why should you use predictive modeling?

---

- Because you already are!
- Most people stumble at predictive modeling by not getting started
- You probably already have the steps in place to get started

## How can you use predictive modeling?

- Prospect-to-Inquiry
- Inquiry-to-Apply
- Admit-to-Enroll
- Financial Aid
- Student Support
- Retention
- GPA
- On-Time Completion
- Retention
- Advancement
- Any binary or real number outcome

You're closer than you  
may think

---

2

# Six Steps to Predictive Modeling

## Steps You're Probably Already Doing

1

**Collect data relevant to your target of analysis**

2

**Organize data into a single data set**

3

**Clean your data to avoid a misleading model**

4

**Create new, useful variables to understand your records**

## Steps You May Still Need to Tackle

5

**Choose a methodology/algorithm**

6

**Build the model**

# 1. Collect data relevant to your target of analysis

**Data collection often happens without us even thinking about it.**

Student registration patterns are collected automatically when a student registers

Application data is captured within the system used by Admissions during admissions season

Fringe data or data from new systems like mobile apps and event registration platforms

## Challenge

**The data may not be easily accessible.** Local IT resources might gate your student database, or it could be hosted on a remote, secure server by the vendor.

## Solution

Barriers can sometimes be alleviated through **partnerships, proof-of-concept projects, or technological solutions.**

## 2. Organize data into a single data set

### Your Data Now

- You're likely already merging these tables for reporting and ad-hoc queries, meaning you're probably already doing much of this work.
- Student information systems and data warehouses, like EAB's Edify, often store related data in the same or just a few tables.

### Challenge

Organizing vast amounts of disparate data can be complex and time-consuming.

### Solution

- Focus on a core set of variables for initial passes.
- Then if time allows, adding supplemental fields can be very beneficial.
- You may be surprised by how much a model can reveal using just basic information from your systems.

### 3. Clean your data to avoid a misleading model

#### Challenges

- Data preparation can be 80% of the work in a modeling project
- Predictive modeling often requires exploring new fields that aren't part of existing cleaning processes.
- Hypotheses about predictors, like digital and campus transaction data, might require additional cleaning and formatting.

#### Solutions

- Your institution (or you!) are likely cleaning some data already
- Fields included in reports and dashboards are probably in good shape, with no missing values or incorrect labels.
- Databases generally have "Constraints" on fields, such as student IDs that cannot be null, predefined sets of values for inputs (like "Major")

## 4. Create new, useful variables to understand data

**Institutions often create new variables for reporting, which can be used in predictive models.**

### Challenge

You aren't sure what variables to create.

### Solution

Creating new variables can be a fun and creative process, asking "What else might help us understand this outcome?"  
*(If you don't have time for this step initially, you can still build a model and revisit it in future iterations.)*

You create **a flag for students taking a required lab-science course.**

You use this data to **avoid capacity bottlenecks** in the lab science course.

Such flags can be useful in predictive models for **retention or on-time completion.**

# What now?

---

# 3

# Steps You May Not Already Be Doing

## Choose a methodology

- ▶ Reach out to colleagues and leadership to find out if they already engage with a predictive modeling solution.
- ▶ Contact your EAB Strategic Leader to see if they have recommendations for your predictive modeling project.

## Build the model

- ▶ Use Excel to build a basic regression model.
- ▶ Use Predict or another statistical package—reach out to Rapid Insight Support to get started with Predict.

### Next Steps

We're hoping everyone will leave this session with at least one point of curiosity they can chase down or add to their Summer project list.

# Live Demo

---

# 4

Do you feel more confident now to explore  
predictive modeling?

---

# Join Us for Our Institutional Reporting Series!

## Steps to Build, Use, and Evaluate Your Model

### Accreditation Reporting

Learn how to align data analysis jobs with your institution's accreditation requirements like:

- Merging/appending tables where needed
- Performing known cleanup tasks
- Creating useful new variables

**JULY 11**

### Ad Hoc Reporting

Manage ad hoc requests outside annual compliance reporting more efficiently by:

- Using metadata to get a sense for the dataset itself
- Reviewing correlations between characteristics and outcomes

**NOVEMBER 7**

### Catch Up: IPEDS Reporting

Watch the recording from our first Institutional Reporting session, where we covered 3 key areas essential for Rapid Insight users responsible for annual IPEDS reporting:

- Fixed width formatting
- Transposing data
- Creating flags for key demographics

**[Watch the recording](#)**

**[Register for the sessions here!](#)**
